THE NERD REICH

There is one thing that can ruin a day, and for me that is technical issues. What I mean is I have been so spoiled at having instant information right at my fingertips. However, if I am working using my computer and suddenly there is a buffer where pages don't load quickly, I get this disappointment, an upsetting fear that I will be spending my whole day trudging through resources at a snails pace.

I have been hearing that I am not the only one. I have been talking with friends that have been saying that their Google Chrome system has evidently slowed down and the problem is that there is no customer service to help them.

You just have to wait until someone realizes that the process is slowing everyone down

Yesterday it was reported that both Yahoo Mail and AOL mail users started reporting issues accessing their emails with reports streaming into the outage website Down Detector starting around 7:30 a.m. Pacific Thursday morning.

Yahoo Mail saw a spike of over 10,000 reports around 9:00 a.m., it has declined a bit but reports still sit near 8,000 on Down Detector. What is most disconcerting is that this reminds us of just how much we depend on technology and how those who have the power and the know how can immediately change our lives with just a stroke of the delete key.

The powerful dictators of tech have more power now than our elected leaders do literally, and we are seeing all of the power being delegated now as laws have been passed to allow for what can only becalled the Nerd Reich.

In a world increasingly ruled by tech companies, some of the industry's most powerful figures appear to be quietly drafting blueprints for the near future. There's just one catch: it may or may not be a democratic one.

A growing number of Silicon Valley elites are pursuing a vision of power not rooted in the common good, but in profit, feudal hierarchy, and total control of the platforms that define daily life for hundreds of millions of people.

The tech overlords have been ever present in making decisions about war planning and the medical surveillance state and the same names and businesses are connected to anything from designer babies, to weather control.

I cant get through a story anymore without hearing about decisions made by Palantir founder Peter Thiel, Tesla and SpaceX CEO Elon Musk, venture capitalist Marc Andreessen, and cryptocurrency titan Brian Armstrong, with some OpenAI CEO Sam Altman sprinkled in for good measure.

These guys seem to be the ones in control while our elected leaders are chasing scams and scandals -- everything else is under the subtle control of technofascists.

This would explain our leaderships' increasingly undemocratic actions.

It would be easy tio say that everything seems to be running by algorithm because it is being run by algorithm.

I have often warned of how the World Economic Forum has decided that legacy systems of the past need to be taken down to make way for newer more efficient ones.

Well, this may very well be the move that will do all that -- who needs the old ways when the new technologies can be used to control the little things that these stake holder capitalist don’t have time to trifle with.

We're quickly marching into the dictatorship erected by a handful of the richest techy tycoons in the history of humankind.

At the core of the Nerd Reich is the insistence that liberal democracy, the governmental system characterized by rule of law, is set to collapse any minute now. When that happens, the billionaire cabal hopes to be ready.

Yes, everything can be replaced and without any real regulations -- these tech giants are free to do what is necessary to bring progress into the new world they are building.

Instead of democracy, we will have basically tech feudalism — kingdoms run by tech corporations.

Marc Andreesen, for example, in his 2023 Techno-Optimist Manifesto, argues that an unregulated tech industry, not democracy, is the key to unlocking the "ultimate open society." Andreessen's enemies, he says in no uncertain terms, are pesky ideas like "sustainability," "trust and safety," "tech ethics," and "social responsibility."

These men are already investing billions into network-state schemes, lobbying for "freedom cities," and using their platforms to erode trust in public institutions.

The Freedom City, or 15 minute city is similar to the Nazi ghettos -- the ghettos isolating Jews were meant to be temporary. In many places, ghettoization lasted only a few days or weeks. In others, ghettoization lasted for several years.

Jews were forced to move into the ghettos, where living conditions were miserable. Ghettos were often enclosed districts that isolated Jews from the non-Jewish population and from other Jewish communities.

These freedom cities will be in place to limit travel and to keep things nice and confined in districts that can easily be monitored and patrolled by robot police dogs and other electronic surveillance systems.

Political theorists of all stripes have long argued that when economic power is concentrated, political power follows. These technocratic billionaire ideologues are actively investing in a future where their immense wealth buys not just influence over elected politicians as is arguably the case today but the rule of law itself.

If corporate rule is allowed to sink its teeth any further into our institutions, democracy as we view it could become a historical footnote.

As we are watching the unraveling of our government we may be already experiencing the crumbling of our foundation where constitutional law is completely obliterated by laws that can be updated on a whim with a few keystrokes and trillions of dollars.

We are told that the future will be an experience where we will own nothing and be happy -- well of course, we will because AI is going to get rid of millions and millions of jobs.

Well, what’s going to happen to those people who can no longer work? What is their future? What is the future of their children? What does democracy look like when you don’t get to eat unless someone like Peter Thiel or Elon Musk is evaluating your worth through biometric scans that may show your genomic inferiority to their idea of a master race?

Behind the hyped-up rhetoric of "innovation" lies an age-old project: the wealthy elite reshaping society in their own image. The antidote is also old: democratic resistance and politics built around in the material needs of the many, not the dystopian fantasies of a wealthy few.

Haven't we been forewarned in a lot of our own science fiction stories to steer clear of what can only be seen as the Borg?

When does "You will own nothing and be happy" turn into "resistance is futile?

Elected representatives everywhere are compromised, bought or bribed because we invested those representatives with the power that criminal organizations want. Predictably, a technocratic cartel is now locking itself into the place of government.

Abandon the belief that only power in the wrong hands is bad. No benevolent dictator was ever going to save us.

But tech will -- tech is the answer, maybe tech is the very thing that will be the brains and nerve center of the New World Order.

The framers of the US Constitution did not envision representatives having the power to manipulate the economy, culture, and education with high tech.

I suppose they expected citizens to be more directly responsible for themselves and their neighbors. Little by little, citizens have been begged authoritarians to take control.

Now government is the one-stop shop for everything humanity needs. All the other venues have been boarded up. We are being ushered into a digital ID prison for our entertainment and convenience.

All of our data, as well as that of our representatives, has been collected together: health, taxes, purchases, banking transactions, court records, genetics, biometrics, travel, browsing history, online comments, text messages, email, and even things we've said out loud around our smartphones.

Palantir has all us thought criminals on a list. During the Covid psyop, it was Painter that handled the logistics of instituting medical martial law. With the "modernization" of government information technologies, they are going to be handling all the logistics.

They did well -- at least the government thinks so.

Meanwhile, every day we hear more about lawlessness within our governments: controlled or stolen elections, illegal acts of war, violations of civil liberties, and outright mass murder. The message is: "You are powerless. You are useless."

In recent days, they've ceased pretending that they intend to rule by any other means but by military technofascism.

They are now revealing the sordid side of politics and the people are not demanding justice -- they just see it as titillating entertainment.

Government has gone from supplying court houses for jury trials, building roads and delivering mail, to trying to micromanage the economy, culture, and society using tech models that provide out come scenarios that are reviewed.

It is all about rolling the dice and having faith that the computer model is correct in its assessment of human behavior and reaction.

As for the future, what confidence and certainties can we have for our children and grandchildren? Countries might not exist in any recognizable form as a new world order is cemented.

As social animals, human beings create society. Over generations, each community establishes and maintains its customs, beliefs, roles and relationships. While ideologically progressive humanists emphasize that we have more in common than our differences in race, religion or region, a person from one culture cannot simply move to a place of different culture and expect life to go on as normal.

The crucial component of society is time, measured in lifetimes of immersion. Indeed, human beings + time = culture. In this equation, important factors may be understood as nature or nurture in the human-temporal complex, such as terrain, resources, climate, commerce, conflict and technology. Each society writes and curates its history.

In the classic dystopian novels of Nineteen Eighty-Four and Brave New World, the past was deleted by design. Winston's job is to revise records of events to comply with the current narrative, as it evolves. In Aldous Huxley's futurism, babies are born by machine, and the idea of a woman giving birth is disturbing.

Think of all of the stories that have been reported about babies being designed -- groups like Oracle Health who again are funded by Peter Theil one of the members of the Nerd Reich.

It is all becoming clear as to what the beast system is looking like.

Facts derived from experience, common sense or critical thinking become 'misinformation' or 'hate'. Even these so called A.I. assistants online will tell you that certain stories are invalid conspiracy theories like chemtrails for example.

Knowledge handed down through generations is denigrated as unscientific old wives' tales or prejudice from an intolerant past. The young, most heavily targeted by propaganda, are encouraged to reject time-honored truths.

Placing the populace in uncharted territory, puts them at the mercy of the powers-that-be. Throwing everyone into a digital order will certainly panic some people -- but we all adapt to technology-- the hand held phones and home computers are evidence of that.

We have also adapted our social lives around technology. People really don't gather anymore -- things like Shopping malls are considered ancient history ans much of what we want is bought online.

Some churches, banks and pubs will close -- some already have.

The World Economic Forum tells us that ‘you will own nothing and be happy’, but someone must own the capital. Generational inheritance will end, farms will be sold off to Chinese businessmen.

While the present is most visibly changing in demographic transformation, the near future poses an existential threat to humanity, making inter cultural tensions seem like a picnic in the park. The future, if the technocrats get their way, is transhumanism.

The United Nations Convention on the Prevention and Punishment of the Crime of Genocide (1948) defines genocide as the killing of a national, ethnic, racial or religious group. But there is also the concept of cultural genocide, as devised by Raphael Lemkin, entailing ‘systematic and organized destruction of the cultural heritage’.

A culture can be wiped out without a shot being fired. The technocrats have been playing a long game, preparing for a post-cultural future.

Elon Musk once said:

“If one company or small group of people manages to develop godlike digital superintelligence, they could take over the world. At least when there’s an evil dictator, that human is going to die. But for an AI, there would be no death. It would live forever. And then you’d have an immortal dictator from which we can never escape.”

Well, the foundation of all of this tech terror has already been put into position.

Trump’s latest legislative initiative—a 10-year ban on AI regulation buried within the “One Big Beautiful Bill”—strips state and local governments of the ability to impose any guardrails on Artificial Intelligence until 2035.

That is almost a whole generation of building the perfect beast and to usher in the Nerd Reich.

Well, now it has passed into law -- the plan is going forward, and we were none the wiser.

This is where AI will operate without oversight in every sphere of life, from law enforcement and employment to healthcare, education, and digital surveillance.

This is not innovation.

This is institutionalized automation of tyranny.

This is how, within a state of algorithmic governance, code quickly replaces constitutional law as the mechanism for control.

We are rapidly moving from a society ruled by laws and due process to one ruled by algorithm.

In this regime, the law is no longer interpreted. It is executed. Automatically. Mechanically. Without room for appeal, discretion, or human mercy.

These AI systems rely on historical data—data riddled with systemic bias and human error to make predictions and trigger decisions. Predictive policing algorithms tell officers where to patrol and whom to stop. Facial recognition technology flags "suspects" based on photos scraped from social media. Risk assessment software assigns threat scores to citizens with no explanation, no oversight, and no redress.

These algorithms operate in black boxes, shielded by trade secrets and protected by national security exemptions. The public cannot inspect them. Courts cannot challenge them. Citizens cannot escape them.

The result? A population sorted, scored, and surveilled by machinery.

This is the practical result of the Trump administration's deregulation agenda: AI systems given carte blanche to surveil, categorize, and criminalize the public without transparency or recourse.

And these aren't theoretical dangers—they're already happening.

An executive order titled "Removing Barriers to American Leadership in Artificial Intelligence," signed by President Trump in early 2025, revoked prior AI safeguards, eliminated bias audits, and instructed agencies to prioritize "innovation" over ethics. The order encourages every federal agency to adopt AI quickly, especially in areas like policing and surveillance.

Under the guise of "efficiency," constitutional protections are being erased.

The result is a system in which government no longer governs. It processes.
